

## Environmental Commitment

Understanding that our business operations impact the environment, we comply with and, where possible, work to exceed legal and other requirements relating to our activities and those of the industry. We also keep up to date on the latest international codes, standards and best practices, and incorporate these into our corporate policies, business decisions, purchasing, supply chain management, development, and delivery of products and services. IVL is committed to expanding our business sustainably and incorporating ESG criteria when conducting due diligence on mergers and acquisitions as well as when planning for greenfield expansions and report regularly on environmental issues in our Sustainability Report and website.

### Reducing our Environmental Impacts

We are committed to ensuring that our assets are operating at an optimal efficiency, and that our environmental maintenance and investments remain effective through certifications as well as in monitoring our Environmental Performance and Environmental Return on Investment management systems.

IVL will continue to maintain an internal management structure with oversight of environmental issues that have clearly defined responsibilities to deliver on our policy commitments, monitor our environmental performance and establish objectives and targets for improvements. We are working conscientiously to prevent and reduce any adverse impacts on the environment and seek similar commitments from our suppliers.

### Climate Change

Climate change is a pressing global concern among national governments in countries where we have operations, and we are strongly committed to doing our part. We are reducing greenhouse gas (GHG) emissions from our operations in a manner that supports national strategies, and which are in-line with the commitments of our stakeholders to operate a sustainable business. Our climate change commitments also include proper GHG accounting, climate change risk mitigation and innovations to reduce impacts, engagement with stakeholders, public disclosures, and mechanisms to ensure accountability for climate change related matters within our organization. We are actively assessing the potential impacts to our business from the evolving effects of climate change as part of our ongoing risk management processes; collaborating actively with key stakeholders, including suppliers, to improve reductions in waste; and reporting on our progress annually in our Sustainability Report.

## Energy Management

The ultimate objective of energy management is to manage and reduce our energy consumption. We remain committed to reducing our energy intensity and consuming more renewable energy. To achieve net zero, we are actively reducing our reliance on conventional energy while increasing our use of renewable energy sources such as solar power, biomass, biogas and renewable natural gas, in addition to continuing to drive diverse and multiple energy saving initiatives throughout our operations. Our increasing focus on energy efficiency allows us to be more competitive by reducing our energy costs, minimizing our environmental impacts and contributing to a lower-carbon economy. We are rolling out the use of renewable energies; low-energy lighting solutions and energy efficient equipment; and teleconferencing facilities to reduce travel to meetings in an effort to further lower our carbon footprint.

## Circular Economy

We recognize the key role we can play in developing a circular economy – which relies on recycling materials leading to reduced water, energy and material consumption as well as GHG emissions. In addition, we are working to minimize our carbon dioxide (CO<sub>2</sub>) emissions through reductions in energy use, improving operational eco-efficiency and reduced resource consumption. PET is a 100% recyclable and versatile plastic with a lower carbon footprint than alternative packaging materials. We are also proud of our commitment to rPET, a material highly suited to the circular economy and which we believe offers consumers an opportunity to contribute to a closed-loop system. IVL will actively innovate to find appropriate solutions for environmental challenges – from collaborations in developing bio-based products to our leadership role in promoting a circular economy. Through our Climate Change Strategy and Product Stewardship Initiative, we are incorporating the evaluation and minimization of environmental impacts into the design and manufacture of our products, as well as their handling and transportation.

## Water Management

IVL is committed to sustainable water management (including water withdrawal and discharge) through our Water Management Policy and Strategy. We comply with all applicable environmental laws, international standards, procedures, and regulations in the countries where we operate and proactively demonstrate our leadership through responsible water use in-line with our values. In focusing on our business performance and objectives, we are reducing our water intensity and minimizing water-related risks globally through our enterprise risk management in addition to creating sustainable business value. Water management is a key component overseen by IVL Group which mandates environmental stewardship, environmental protection, and the efficient use of natural resources.

## Waste Management

We ensure that strong compliance standards are in place to manage waste at our sites according to regulatory requirements, will continue to do so in a responsible manner and exceed regulatory requirements where possible. We are committed to reducing our waste and increasing its disposal through sustainable vendors that reuse, recover or recycle, and working hard to reduce hazardous waste and ensuring that its disposal is handled by appropriate vendors. This includes proper waste inventory by name, type, code (as required by law), storage location, method of offsite transportation, treatment and disposal, and quantity of waste generated, stored onsite and disposed of onsite and offsite.

## Biodiversity

IVL understands the importance of biodiversity and safeguarding an ecosystem and promotes the development and growth of natural heritage. Focusing on biodiversity protection and management is a crucial step in ensuring IVL's long-term corporate success and growth. We are committed to conserving and promoting biodiversity, furthering our aim of achieving sustainable development in the management and growth of our business. Accordingly, we work with relevant authorities and affected parties when operating from sites outside industrial estates and ensure their protection through effective pollution control measures and management plans to conserve or enhance biodiversity. IVL complies with all relevant statutory requirements and guidelines with respect to designated areas for new development sites and identifies any existing site that may have the potential to enhance biodiversity, and over time, we develop appropriate action plans to achieve this. In partnership with officials, local and national organizations, we identify programs and initiatives to support biodiversity.

## Stakeholder Management

We collaborate with stakeholders and partners to protect the environment, increase understanding of environmental issues, and encourage good practices, together with making continued improvements in the management of environmental impacts. This includes selecting contractors and suppliers based on their environmental, social and governance performance, which we continually review. Our partners also include our downstream operations as our objective is to collaborate with customers to reduce any environmental impacts from logistics. We continue to be a responsible neighbor in the communities where we operate and support their quality of life. Effective mechanisms are in place to engage with local communities with respect to our operations, likely hazards, and emergency response plans. IVL is also committed to minimizing environmental impacts from non-managed operations and joint ventures through satisfactory engagement with relevant stakeholders.
